1.Pom.xml

The screenshot shows the Visual Studio Code interface with a project named `my_maven_project`. The left sidebar displays the `FOLDERS` view, showing the project structure: `MY_MAVEN_PROJECT` (containing `target`, `App.java`, and `pom.xml`), `WORKSPACE ENVIRONME...` (containing `No Active Enviro...`), and `ENVIRONMENT MANAGE...` (containing `Conda 24.1.2`, `Global`, and `Venv`). The main editor area shows the `pom.xml` file, which is a Maven project configuration. The code is as follows:

```
1 <project xmlns="http://maven.apache.org/POM/4.0.0"
2   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
3   xsi:schemaLocation="http://maven.apache.org/POM/4.0.0

2.App.java

The screenshot shows the Visual Studio Code interface with a project named `my_maven_project`. The left sidebar displays the `FOLDERS` view, showing the project structure: `MY_MAVEN_PROJECT` (containing `target`, `App.java`, and `pom.xml`), `WORKSPACE ENVIRONME...` (containing `No Active Enviro...`), and `ENVIRONMENT MANAGE...` (containing `Conda 24.1.2`, `Global`, and `Venv`). The main editor area shows the `App.java` file, which is a simple Java class. The code is as follows:

```
1 package com.example;
2 public class App {
3   public static void main(String[] args) {
4     System.out.println("Hello Maven Jenkins Project");

Pipeline

Build, test, and deploy using pipelines. Supports stages, parallel work, and running on multiple agents.

Freestyle project

Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

Maven project

Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.

External Job

This type of job allows you to record the execution of a process run outside Jenkins, even on a remote machine. This is designed so that you can use Jenkins as a dashboard of your existing automation system.

Multi-configuration project

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

Multilob Project

Multilob Project, suitable for running other jobs

Ivy project

Build an Ivy project. Jenkins takes advantage of your Ivy module descriptor files to provide additional functionality.

Folder

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a
